Uniform amide search: every current source context

Common3 → common6 · operational selection · 257 distinct contexts from 260 memberships · fixed canonical bands

Common3 · Common6 · Ca conditioning · La conditioning · 2Ca conditioning · Conditioning unspecified · Unavailable (NA gutter) · Recorded regression / lost coverage

Recorded paired score R − fixed canonical Ca_max (kcal/mol); same display offset and x scale in every panel

Shading: Ca-supported | inconclusive | La-supported. Dashed lines are the saved canonical boundaries; no thresholds are refitted.

Consumed development evidence. Structures, cohort overlaps and triples are correlated; no independent biological validation or production promotion.
